再思社區健康組織

Introduction

Target group: Men who have sex with men

The objectives of the Project include:

- To prevent drug abuse and to promote positive development among general “Men having Sex with Men” (MSM);
- To identify MSM drug abusers and provide them with bio-psycho-social assessment, ongoing counselling, health education, medical referral and peer support services; and
- To enhance the competence of social workers, health care professionals and other interested persons in helping MSM drug abusers.

Project Content

- Outreaching (community outreach and online outreach)
- Volunteer programme
- CF Care programme
- Substance use treatment programme
 - individual counseling
 - medical assessment and treatment
- Professional training and sharing programme

Output and Outcome Evaluation

- As required, the organization has completed relevant records after each interview, visit, outreach and online anti-drug outreach, case counseling and group activities.

Output Benchmarks & Evaluation Results 1

	Expected Result	Achieved Result

Outcome Indicator 4	70% of participants show improvement in motivation to quit drugs	94.2% of participants (49/52) showed improvement in motivation to quit drugs after attending counselling sessions

Experience Gained

- Substance use is extremely hidden among MSM. There is no single reason for MSM to abuse drugs, but "sexual" contact is a common starting point
- A familiar and gay-friendly environment is very important for them to quit drugs
- Individual counseling and assessment plays an important role to help substance users to quit and cope with life and refer to mental health service.

Short films made specifically for MSM, aims to increase the MSM community awareness and promote "no drugs"

Conclusion

- During the COVID-19 epidemic, we tried to use online software to hold online group activities and interviews.

Conclusion

- Overall, the objectives, results and performance indicators of the event were successfully achieved.
- Substances that can cause symptoms of depression and/or anxiety or make an existing problem worse, which require cross-departmental cooperation, so counseling and psychiatric services are very important.

Short film

吸毒是問題的開端或是問題的背後？短片的主角是為了什麼開始Chem Fun, 又為什麼想改變？
